

WELCOME TO THE BITWEAVER INSTALLER

Begin the installation process

Thank you for choosing bitweaver. This web application offers an unparalleled combination of flexibility, performance, and simplicity.

For questions, comments, or support, please don't hesitate to visit <http://www.bitweaver.org>. Help is available via [the forums](#) or come and visit us at [#bitweaver](#) on irc (if the irc link doesn't work, there are [detailed directions](#) on how to meet up with us on irc).

This installer will guide you through the installation of bitweaver.

Begin the Install process

Upgrade bitweaver

If you have an existing version 1 of bitweaver installed and would like to upgrade to version 2, please use the upgrader.

This path will only work for upgrading bitweaver release one to release two. if you want to upgrade from previous versions or from other applications such as tikiwiki, please follow the installer, you will have options to do this later on.

Upgrade bitweaver R1 to R2

BITWEAVER **PHP** SETTINGS

Server Settings

Required Settings

The settings below are required by bitweaver to run. If any of these settings are not met, you will have to change these before you can continue with the installation process.

Required settings

✓ **PHP version** is greater than **4.1.0**.

Your installed version of PHP is **4.4.4**.

✓ The configuration file **'/home/kozuch82/public_html/bw-r2-beta/kernel/config_inc.php'** is available and the file is writeable.

✓ The directory **'/home/kozuch82/public_html/bw-r2-beta/storage/'** is available and it is writeable.

✓ The directory **'/home/kozuch82/public_html/bw-r2-beta/temp/'** is available and it is writeable.

✓ Your system meets all the requirements.

Recommended Extensions

Virtually all settings below this point can be adjusted by changing appropriate values in your

DATABASE CONNECTION INFORMATION

Please Enter your Database Connection Information

Database type

MySQL

The type of database you intend to use.

If the database you wish to use is not listed above, the version of PHP on this server does not have support for that database installed or compiled in.

Host

localhost

Hostname or IP for your MySQL database, example:

Use 'localhost' if your database is on the same machine as your server.

If you use Oracle, insert your TNS Name here

If you use SQLite, insert the path and filename to your database file

If you are not sure what to put in here, try using localhost.

User

Database user

Password

Database password

Database name

The name of the database where bitweaver will create tables. You can create the database using mysqladmin, or PHPMYAdmin or ask your hosting service to create a MySQL database. Normally bitweaver tables won't conflict with other product names.

Database Prefix

This prefix will be prepended to the beginning of every table name to allow multiple

PACKAGE INSTALLATION

Install Packages

Required Packages

Please select packages and services you wish to install

This is a list with all available bitweaver packages that are ready for installation. Packages that are installed now, can later be deactivated and even deleted from your server if you don't need them anymore.

If you have any external packages such as **phpBB** or **gallery2** lined up for installation, you will have to do this separately after completing the bitweaver installation process.

☒ Batch (de)select all Packages and Services on this page

Packages

Packages are the parts of bitweaver that deal with content such as wiki pages, blogs or news articles.

☒ Articles

Description: This package manages news articles to create a slashdot-like news site.

BITWEAVER SETTINGS

Some Preliminary Settings

You can take advantage of setting some preliminary settings that will help you set up your site quickly and easily. Since bitweaver has so many settings and features, we thought it might be useful to collect some of the key settings to simplify the initial stages.

These settings can all be found from the Administration panel.

Browser title

Demo site

Enter the title that should appear in the title bar of the users browser when visiting your site.

Site slogan

Slogan comes here

This slogan is (usually) shown below the site title.

Home page

wiki

Pick your site's homepage. This is where they will be redirected, when they access a link to your homepage.

My Home This page contains all links the user can access with his/her current permissions. It's like a personal administration screen.

Group Home You can define an individual home page for a group of users using this option. To define home pages, please access the **Administration --> Users --> Groups and Permissions** page.

Other Home Pages Here you can set a particular package that will serve as your home page. If you want to select an individual home page from the existing ones, please access the **Administration --> 'Package' --> 'Package' Settings** page.

SAMPLE DATA

Populate Your Database With Useful Information

Here we provide you with the option to add some sample data to your installation of bitweaver. If this is your first installation, we recommend that you take advantage of this option, since the information added contains useful information on how to use and navigate the appropriate packages.

Also, by adding this data to your database you will enter the site with a feel for what it will look like when populated with your own data. This simplifies theme selection and allows you to evaluate the product more easily.

This page is only available during the first installation as it can cause problems when applied more than once.

✓ Your system is ready for use now.

bitweaver features useful helpnotes throughout. However, should you require more help, you can always contact us by any of the means mentioned below.

Since we are still working hard on improving usability and stability of bitweaver, we haven't had time to translate bitweaver into various languages. If you are interested in helping us translate parts of bitweaver, please feel free to contact us.

If you want to find out more about existing packages and how to install them, you can find information at [bitweaverFeatures](#).

Best methods to get in contact with us:

- IRC ([instructions](#) on connecting to irc)
- [Sourceforge mailing list](#)
- If you wish to report any bugs, we urge you to do this at [Sourceforge](#)
- the [bitweaver Forums](#) might contain useful information.
- [bitweaver](#) currently contains all the documentation we have.

If you think you could contribute to bitweaver in any way, please feel free to contact us. we appreciate all the help we can get.

Some final notes

• Security

• Linux

Change the directory permission with 'chmod 000 install/'. If need to run the installer again, you will have to revert the permissions with 'chmod 755 install/'.

• Windows

- [bitweaver](#) currently contains all the documentation we have.

If you think you could contribute to bitweaver in any way, please feel free to contact us. we appreciate all the help we can get.

Some final notes

- **Security**
 - **Linux**
Change the directory permission with '`chmod 000 install/`'. If need to run the installer again, you will have to revert the permissions with '`chmod 755 install/`'.
 - **Windows**
Rename '`install/install_inc.php`' to something like '`install/install_inc.php.done`'
 - **bitweaver Configuration**
We urge you to look at your `kernel/config_inc.php` file. It has various useful settings for sites in production. One of these is the **IS_LIVE** parameter. Setting this to **TRUE** will prevent any visible bug reports and will therefore not display sensitive information to the user.
- **Performance**
 - For production sites, we recommond you visit our [bitweaverPerformance](#) page on how to optimise your bitweaver install.
 - Please also have a look at your `kernel/config_inc.php` file. It contains various settings that cannot be set elsewhere and which might be of interest to you.

Finally, we thank you again for trying bitweaver.

Welcome

The Wiki Package of bitweaver

Created by: [root](#), Last modification on one minute ago by [Guest](#)

Welcome to bitweaver.

We appreciate that you are taking the time to test this unique product. bitweaver allows you to create a website exactly the way you want it to be. You can install packages as you need them, enhancing or reducing the functionality of your site. If you should have space limitations you can delete packages from your server without any consequences (as long as it's none of the required folders).

bitweaver was built with extensibility in mind and thus we have made it *easy* to create new packages for developers and just plug them into the bitweaver framework. We envisage that several packages will be created in the near future. If you should require additional functionality, it is worth keeping your eyes on [bitweaver Features](#), where we will announce all new packages as they are developed and reach a stable status.

bitweaver allows you to manage your content the way you want to.
